SKILLS

Technical Skills

- JavaScript
- TypeScript
- React
- HTML / CSS
- Git & GitHub
- SQL / MySQL
- Python
- Microsoft Excel
- Microsoft PowerPoint
- AI-Assisted Development

Soft Skills

- Analytical Thinking
- Problem Solving
- Attention to Detail
- Proactive Mindset

LANGUAGES

Romanian — Native

English — Advanced (C1)

CERTIFICATES

Cambridge English: Advanced (C1)

Web Programming 102

Web Programming 101

SUMMARY

Engineering student interested in process automation, Artificial Intelligence and software development, with a strong passion for the automotive industry. Experienced in building functional software and embedded prototypes, and motivated to apply analytical thinking to simplify workflows, reduce repetitive tasks and improve operational efficiency.

PROFESSIONAL EXPERIENCE

Vodafone Intelligent Solutions (VOIS)

Summer School of Engineering Participant

07/2026 – 08/2026 | Bucharest, Romania

- Completed practical workshops in Python, Cloud Development, DevOps, Agile, Quality Assurance, Design & Architecture, Artificial Intelligence and Cybersecurity.
- Applied software engineering concepts through technical exercises and collaborative workshop activities.
- Worked with industry mentors while developing structured problem-solving and teamwork skills.

EDUCATION

B.Sc. in Electronics, Telecommunications and Information Technology

POLITEHNICA Bucharest

2024 – 2028 | Bucharest, Romania

- Relevant coursework: Programming, Database Systems, Object-Oriented Programming, Data Structures.

PROJECTS

Automotive Service Management System

React, TypeScript, Node.js, Express, MySQL

- Developed a full-stack application for managing customers, vehicles, inventory and invoices.
- Designed and integrated a relational MySQL database with role-based access for managers and clients.
- Implemented CRUD operations through a React interface and Node.js backend, creating a functional prototype for automotive service operations.

Blackjack Game on ESP32

C++, ESP32, OLED Display

- Developed a functional embedded Blackjack prototype using an ESP32, OLED display and physical input controls.
- Implemented game logic, input handling and hardware-software integration through iterative testing.

To-Do Web Application

JavaScript, HTML, CSS, Local Storage

- Built a task management application supporting task creation, editing, completion tracking and persistent local storage.
- Implemented responsive user interactions and local data persistence using JavaScript and Local Storage.
